- Three-dimensional DTS
- Research department
- Advanced training courses

### DENTINIC philosophy

No one likes to go to the dentist. We want to change this notion by creating an atmosphere of style and ease, perfected by the splendorous beauty of Garmisch-Partenkirchen.

No one has endless time to see a dentist. Our treatment comes in few condensed appointments: a total restoration can be done within 3 to 5 treatment units while, at the same time, you're enjoying your vacation in Bavaria.

If you wish, our service managers will organize your trip. Feel free to contact us without any obligation.

#### □ Natural smiles

For 30 years now, Dr. Günther Bail and his team have been applying themselves to dental restorations that are agreeable to your lineament.

Decades of experience grant consummate results in healthy and beautiful smiles, that perfectly fit the patient's individual characteristics.

Our areas of expertise cover whitening, bonding, cosmetic contouring, veneers, orthodontics, crowns, implants, dentures and more. We'll make you smile with confidence.

Because the smallest change in your smile can make a distinct difference in the way you look and feel about yourself, we consider cosmetic dentistry as an integral part of dental health and function.

#### □ No more dental phobia

At DENTINIC, we are well-versed in dental anxiety. All our dentist's chairs provide a variety of distractions such as DVD, CD, TV or PlayStation® 3. First class stereo headphones with NoiseGard® by Sennheiser prevent intimidating noises to be heard. If needed, we know a psychologist to be called in.

#### □ Facility

On 5,000 square-foot area, our dental center houses five state-of-the-art surgeries, whose panoramic windows offer a beautiful view of the Bavarian Alps.

The facility is capable of general anaesthesia and conscious sedation. Being equipped with separate suction and air conditioning for proper sterility, our surgical suite meets the latest standards of an operating theater.

In case of emergency, we have medical units for cardiac life support available, a fact that enables us to treat high-risk patients.

#### □ In-house laboratory

We know that best results are achieved as a team. Thus we have two highly skilled and experienced technicians working right here at the clinic.

Attending the preparative meetings, they are aware of our patients' individual needs. Latest technologies and materials, such as CAD/CAM and zirconium, are used to create teeth that perfectly match your natural shape, color and contours.
